Dear Martin

### **Revised IDNO Charging Modification Request**

Please find enclosed Modification Request WPD/WALES/WEST/UOS005 that proposes a charging methodology that incorporates revised proposals for IDNO charging. This proposal aims to resolve the issues with WPD/WALES/WEST/003 that was vetoed by Ofgem on 12 July 2007. A change marked version has been included for your assistance. Also included are the revised Use of System Charging Methodology Statements and Statements of Charges for both WPD (S Wales) and WPD (S West) in both final and change marked versions.

I can also confirm the e-mail notification from Nigel Lloyd that Modification Request WPD/WALES/WEST/UOS004 has been withdrawn.

In particular the proposal now includes a banded approach to the predominantly domestic LV tariff to give improved cost reflectivity. Further background information has also been included to support the definition of predominantly domestic sites and there is a specific proposal to deal with sites that fall into a range close to the 50% domestic definition.

Yours sincerely

Nigel Turvey  
Design & Development Manager
