

I used LED Lights to be safe at night.

My Bio fuel is made out of fish and chip shop fat.

The air vents are used to get rid of the smell for the drivers and passengers.

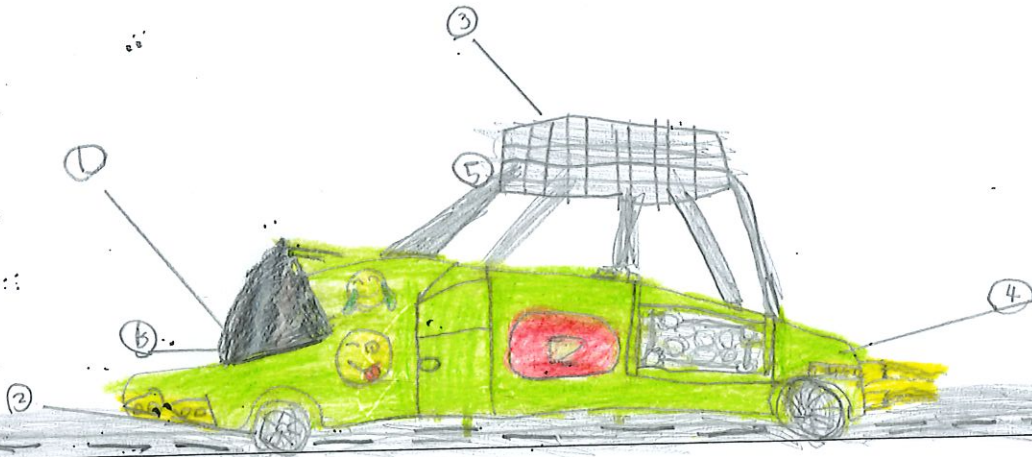

I did a re-cycled rubber bright red strip to be safe for other drivers to see.

My streamline uses less energy than other cars

BMW I5

Boon Boon.

③ Rechargeable car. battery powered
by solar panels.

① Have a sleek design so that they cut
through the air smoothly.

② Low-rolling resistance tyre. (Does not
lose energy ^{from} friction in the wheels
and last longer).

④ Lightweight exterior (Aluminium)

⑤ Stop/Start technology to save
fuel.

⑥ self drive to stick to speed
limits and enhance safety.
